

CAPRICCIO

The general appearance is at a high level and is very constant throughout seasons and environments with high adaptation to main uses.

Capriccio shows excellent tolerance to common diseases such as Red thread and Rusts. The resistance to *Fusarium* (*Gerlachia nivalis*) is better than in most other varieties of chewing fescue.

Use

Golf tees, greens and fairways
Ornamental lawns and shaded areas

Sowing Rate

35-45 (g/m²)
(25-35 when oversowing)

Benefits

Fast establishing - fresh green but low and slow growing
High *Fusarium* resistance
Superior wear tolerance

Ratings

Capriccio maintains a nice appearance during winter.

All ratings are based on European trial data.

Dense, fine and valuable mixture component

Capriccio is very winter hardy and will add extra persistency to mixtures intended for cold areas and largely contribute with improved density and fineness. With scores 8 -8-7 on the German RSM list the high quality is further underlined.

Wear tolerance far above average

Generally chewing fescues don't exhibit high wear tolerance, but Capriccio shows a markedly higher tolerance than the majority of chewing's fescues, extending the possible uses and allowing for better persistency.
